Section F. Livestock Health Care [NOS 205.238]

**Tip!** Organic standards require livestock producers to establish & maintain preventative livestock health care practices. When preventative practices & veterinary biologics are inadequate to prevent sickness, a producer may administer synthetic medications allowed per Section 205.603.

Any medications administered, whether allowed or prohibited, must be recorded on an animal health record. **Withholding medical treatment from a sick animal is prohibited.**

1. Indicate the components of your preventative livestock health care practices below. Check all that apply.
   - [ ] Selection of species
   - [ ] Sufficient feed ration
   - [ ] Appropriate housing
   - [ ] Appropriate pasture conditions
   - [ ] Sanitation
   - [ ] Exercise
   - [ ] Reduction of stress
   - [ ] Freedom of movement
   - [ ] Vaccines
   - [ ] Biologics
   - [ ] Other:

2. Are animals subject to physical alterations?  
   - [ ] Yes  
   - [ ] No

   2a. If yes, provide a description, including the species, type(s) of alterations, age when alteration done, reason for alteration and how pain and stress are minimized (ex.- dehorning, beak trimming):

**Tip!** List all inputs used in your preventative livestock health care plan, including vaccines, on the Material Inventory.

3. If an animal were to be treated with a prohibited material, describe your plan and/or current practice for removing this animal from the organic market:
Tip! Maintain documents that verify that all animals treated with a prohibited material were removed from the organic market, and have available at your next annual inspection.

4. List your annual average percentage of culled (live) livestock: %

5. List your annual average percentage of death or loss: %
