

Cannabis Producers, Processors, and Retailers  
**Bulletin No 25-02**

**Date:** September 2, 2025  
**To:** Cannabis Industry Members  
**From:** WSLCB and WSDA  
**Subject:** Updated List of Pesticides Allowed for Use on Cannabis in the Production of High THC Cannabis

The Washington State Department of Agriculture (WSDA) has recently updated the list of pesticides that are allowed for use on cannabis in the production of high-THC cannabis in Washington State, based on criteria previously established by WSDA.

- WSDA has added 1 new Section 3 pesticide and 2 new Section 25(b) pesticides to the list of allowable products for a total of 3 new products.
- WSDA removed 0 Section 3 pesticides and 0 Section 25(b) pesticides from the list for a total of 0 products removed.
- The updated list contains 236 Section 3 pesticides and 83 Section 25(b) pesticides, for a total of 319 products allowed for use on cannabis in the production of high-THC cannabis in Washington State.

“WPS” and “HG Only” Columns

WSDA has two columns on the list: (1) Section 3 pesticides that are subject to Worker Protection Standard (WPS) requirements, and (2) Section 3 pesticides that are limited to use by non-commercial “HG Only” cannabis growers. The products designated as “HG Only = Yes” may only be used by those individuals authorized to home-grow medical-use cannabis. Products marked as “HG Only = Yes” may not be used in the commercial production of cannabis.

Spray Adjuvants

Spray adjuvants are not included on the list; however, any spray adjuvant that is labeled for use on food crops can be used with an allowed pesticide that is applied to cannabis if the intended use is authorized by the spray adjuvant label. For example, a spray adjuvant labeled only for use with an herbicide cannot be used with an insecticide or fungicide. Information on spray adjuvants registered for distribution in Washington is available from the WSU [PICOL database](#).

Please check your stock of pesticides against the list to ensure you are using an allowed product. Cannabis growers can continue using any existing stocks of pesticides that were removed from the list, but no new product can be purchased.

All the pesticides added to the list contain active ingredients already allowed for use in cannabis production.

Some pesticides are labeled for application to soil or crop plants, while others are labeled for application to both soil and crop plants (e.g., insecticides, fungicides). Other pesticides

include herbicides labeled for direct application to, and control of, unwanted plants (i.e., weeds). Remember to read, understand, and comply with all applicable label directions and precautions when using any pesticide.

Products **Added** to the List:

Type	Name	EPA or WA Registration Number
Section 3	Cyclone	89385-3
Section 25b	AgroPest	994790-25002
Section 25b	Thyme Guard	994790-25001

Products **Removed** from the List: Product registration was cancelled or non-renewed by the registrant:

Type	Name	EPA or WA Registration Number

Please note that several company names on the List have been updated to more accurately reflect the current company name.

You can find the complete list of pesticides that are allowed for use on cannabis in high-THC cannabis production, the criteria WSDA used to establish the list, and information regarding statewide stop-sale orders in Washington on the WSDA website:
