**Purpose of checklist:**

Governmental agencies use this checklist to help determine whether the environmental impacts of your proposal are significant. This information is also helpful to determine if available avoidance, minimization or compensatory mitigation measures will address the probable significant impacts or if an environmental impact statement will be prepared to further analyze the proposal.

**Instructions for applicants:**

This environmental checklist asks you to describe some basic information about your proposal. Please answer each question accurately and carefully, to the best of your knowledge. You may need to consult with an agency specialist or private consultant for some questions. You may use "not applicable" or "does not apply" only when you can explain why it does not apply and not when the answer is unknown. You may also attach or incorporate by reference additional studies reports. Complete and accurate answers to these questions often avoid delays with the SEPA process as well as later in the decision-making process.

The checklist questions apply to all parts of your proposal, even if you plan to do them over a period of time or on different parcels of land. Attach any additional information that will help describe your proposal or its environmental effects. The agency to which you submit this checklist may ask you to explain your answers or provide additional information reasonably related to determining if there may be significant adverse impact.

**Instructions for Lead Agencies:**

Please adjust the format of this template as needed. Additional information may be necessary to evaluate the existing environment, all interrelated aspects of the proposal and an analysis of adverse impacts. The checklist is considered the first but not necessarily the only source of information needed to make an adequate threshold determination. Once a threshold determination is made, the lead agency is responsible for the completeness and accuracy of the checklist and other supporting documents.

**Use of checklist for nonproject proposals:**

For nonproject proposals (such as ordinances, regulations, plans and programs), complete the applicable parts of sections A and B plus the SUPPLEMENTAL SHEET FOR NONPROJECT ACTIONS (part D). Please completely answer all questions that apply and note that the words "project," "applicant," and "property or site" should be read as "proposal," "proponent," and "affected geographic area," respectively. The lead agency may exclude (for non-projects) questions in Part B - Environmental Elements –that do not contribute meaningfully to the analysis of the proposal.

**A. Background**

1. Name of proposed project, if applicable:

Grandview Area Japanese Beetle Eradication
2. Name of applicant:

Washington State Department of Agriculture

3. Address and phone number of applicant and contact person:

Camilo Acosta
21 North 1st Ave Yakima, WA 98902
1-800-443-6684

4. Date checklist prepared:

4/3/2022

5. Agency requesting checklist:

Washington State Department of Agriculture (WSDA)

6. Proposed timing or schedule (including phasing, if applicable):

April 2022-September 2022

7. Do you have any plans for future additions, expansion, or further activity related to or connected with this proposal? If yes, explain.

In the event that expansion of the proposed project area is needed, WSDA is preparing a programmatic SEPA. Expansion of the treatment area will depend on results from the 2022 Japanese beetle trapping survey. Emergency Amendments to the proposed project area may be made if Japanese beetle is detected outside of the proposal area during the trapping season. Washington State Department of Agriculture is also preparing quarantine rules for the proposed project area under Chapter 16-470 WAC. Quarantine boundaries will follow the proposed project boundaries as described in A.12 below.

8. List any environmental information you know about that has been prepared, or will be prepared, directly related to this proposal.

The Washington State Department of Health (DOH) prepared health, safety and environmental information about the insecticides to be used in this proposal. Information can be found at:
https://www.doh.wa.gov/CommunityandEnvironment/Pests/JapaneseBeetles

An Organic Certification fact sheet title “Establishing Organic Buffers” was prepared by the WSDA Organic Program in 2019. The fact sheet will be used as part of the proposal. The fact sheet can be found at:

Quarantine rules as described in A.7 above.

9. Do you know whether applications are pending for governmental approvals of other proposals directly affecting the property covered by your proposal? If yes, explain.

No other applications are pending government approval that directly affect the property covered by this proposal.
10. List any government approvals or permits that will be needed for your proposal, if known.

WSDA may need to attain a solid waste handling permit from the Yakima Health District for a different component of this project relating to the proposed quarantine.

The contractor will need to show proof that all employees involved in treatments are licensed pesticide applicators, as well as provide requested business information. Furthermore, a contractor prepared spill response plan must be on-site during all treatments.

11. Give brief, complete description of your proposal, including the proposed uses and the size of the project and site. There are several questions later in this checklist that ask you to describe certain aspects of your proposal. You do not need to repeat those answers on this page. (Lead agencies may modify this form to include additional specific information on project description.)

The activities within this proposal aim to eradicate Japanese beetle from Grandview and surrounding areas of Yakima and Benton Counties, Washington state. Due to the size of the current infestation, it is considered a multi-year eradication project.

The Washington State Department of Agriculture will supervise licensed pesticide applicators to apply the foliar insecticide Acelepryn® (EPA Reg. No. 100-1489), granular insecticide Acelepryn® G (EPA Reg. No. 100-1500), granular bio-insecticide grubGone® G (EPA Reg. No. 88347-2), and foliar bio-insecticide beetleGone® tlc (EPA Reg. No. 88347-3) to affected properties (public, commercial and residential). Treatments will start in late April 2022, and last until September 2022. Highly infested properties may receive an additional treatment to target adult JB during their flight season beginning in June 2022.

The treatment area totals 1,990 acres and approximately 3,500 properties. Specific areas on properties deemed suitable habitat for Japanese beetle would be treated. In most cases, pest control staff will apply Acelepryn® to turf grass, which is the preferred oviposition site for female Japanese beetle. Acelepryn® will target grubs hatching in late summer and early fall of 2022; therefore, adult beetles will still be present during the flight season. Effected areas outside the buffer of an organic farm(s) may be treated with grubGone® G or beetleGone® tlc.

12. Location of the proposal. Give sufficient information for a person to understand the precise location of your proposed project, including a street address, if any, and section, township, and range, if known. If a proposal would occur over a range of area, provide the range or boundaries of the site(s). Provide a legal description, site plan, vicinity map, and topographic map, if reasonably available. While you should submit any plans required by the agency, you are not required to duplicate maps or detailed plans submitted with any permit applications related to this checklist.

This proposal is located within a 49 square mile area encompassing Grandview and surrounding areas of Yakima and Benton Counties, Washington state.

The portion of Yakima and Benton Counties designated as follows: Beginning within Yakima County at latitude N46°18'8" and longitude W120°0'26"; thence easterly across the Yakima-Benton County line to latitude N46°18'5" and longitude W119°51'39"; thence southerly to latitude N46°16'21" and longitude W119°51'40"; thence easterly to longitude W119°50'25"; thence southerly to latitude N46°13'44" and longitude W119°50'27"; thence westerly to longitude N46°13'44" and longitude W119°51'42"; thence southerly to latitude N46°12' and longitude W119°51'42"; thence westerly across the Yakima-Benton County line to latitude N46°12'3" and longitude W119°59'14"; thence northerly to latitude N46°14'39" and longitude W119°59'12"; thence westerly to longitude W120°0'28"; thence northerly to the point of beginning.

See attached project map
B. Environmental Elements  

1. Earth  

a. General description of the site:  

(circle one): Flat, rolling, hilly, steep slopes, mountainous, other ____________  

b. What is the steepest slope on the site (approximate percent slope)?  

The proposed project area is generally flat from east to west, and maximum percent slope is approximately 5%.  

c. What general types of soils are found on the site (for example, clay, sand, gravel, peat, muck)? If you know the classification of agricultural soils, specify them and note any agricultural land of long-term commercial significance and whether the proposal results in removing any of these soils.  

The proposed project area consists predominantly of Warden silt loam (permeability is moderate, runoff is slow), and Warden fine sandy loam (permeability is medium, runoff is very slow). Other soils in the proposed project area include Scooteney silt loam, Findley silt loam (small amount), Quincey loamy fine sand (small amount), Shano silt loam (small amount), Hezel loamy fine sand (small amount) and Cleman very fine sandy loam (small amount).  

The proposed project will not result in the removal of any soils. Soil information was developed by the United States Department of Agriculture’s Natural Resources Conservation Service (USDA-NRCS).  

d. Are there surface indications or history of unstable soils in the immediate vicinity? If so, describe.  

There are no surface indications or history of unstable soils in the immediate vicinity.  

e. Describe the purpose, type, total area, and approximate quantities and total affected area of any filling, excavation, and grading proposed. Indicate source of fill.  

No filling, excavation, or grading is planned for this proposal.  

f. Could erosion occur as a result of clearing, construction, or use? If so, generally describe.  

No erosion is expected to occur during proposal activities.  

g. About what percent of the site will be covered with impervious surfaces after project construction (for example, asphalt or buildings)?  

Does not apply  

h. Proposed measures to reduce or control erosion, or other impacts to the earth, if any:  

No erosion or impacts to the earth are expected to occur from the activities in this proposal.  

2. Air  

a. What types of emissions to the air would result from the proposal during construction, operation, and maintenance when the project is completed? If any, generally describe and give approximate quantities if known.

No emissions to the air are expected to result from this proposal.

b. Are there any off-site sources of emissions or odor that may affect your proposal? If so, generally describe.

None

c. Proposed measures to reduce or control emissions or other impacts to air, if any:

None needed

3. Water [help]

a. Surface Water: [help]

1) Is there any surface water body on or in the immediate vicinity of the site (including year-round and seasonal streams, saltwater, lakes, ponds, wetlands)? If yes, describe type and provide names. If appropriate, state what stream or river it flows into.

   The Yakima River flows through the southern section of the proposed project area. This river flows southeast and enters the Columbia River once it reaches Richland, Benton County, Washington state.

   The Sunnyside Irrigation Canal runs through the northern section of the proposed project area. It ends north of Benton City, Benton County, Washington state.

   There are a few potential wetland and stream sites within, and in the vicinity, of the proposed project area. See attached maps.

2) Will the project require any work over, in, or adjacent to (within 200 feet) the described waters? If yes, please describe and attach available plans.

   Project work will not occur within 200 ft. of the described waters. Care will be taken by the applicators to follow label instructions when mixing, loading and applying products around areas defined as waterways of Washington state.

3) Estimate the amount of fill and dredge material that would be placed in or removed from surface water or wetlands and indicate the area of the site that would be affected. Indicate the source of fill material.

   No fill or dredge material will be placed in or removed from surface water during proposal activities.

4) Will the proposal require surface water withdrawals or diversions? Give general description, purpose, and approximate quantities if known.

   No surface water withdrawals or diversions will be made during proposal activities.

5) Does the proposal lie within a 100-year floodplain? If so, note location on the site plan.
Does not apply

6) Does the proposal involve any discharges of waste materials to surface waters? If so, describe the type of waste and anticipated volume of discharge.

The proposal does not involve any discharges of waste materials to surface waters.

b. Ground Water: [help]

1) Will groundwater be withdrawn from a well for drinking water or other purposes? If so, give a general description of the well, proposed uses and approximate quantities withdrawn from the well. Will water be discharged to groundwater? Give general description, purpose, and approximate quantities if known.

Groundwater will not be withdrawn from any well for drinking water or other purposes.

2) Describe waste material that will be discharged into the ground from septic tanks or other sources, if any (for example: Domestic sewage; industrial, containing the following chemicals. . . ; agricultural; etc.). Describe the general size of the system, the number of such systems, the number of houses to be served (if applicable), or the number of animals or humans the system(s) are expected to serve.

No waste material will be discharged into the ground during the proposal.

c. Water runoff (including stormwater):

1) Describe the source of runoff (including storm water) and method of collection and disposal, if any (include quantities, if known). Where will this water flow? Will this water flow into other waters? If so, describe.

No water runoff is expected to occur during the proposal activities. In the event that water runoff does occur, it is collected through curbside gutters and storm drains which empty into surface waters.

2) Could waste materials enter ground or surface waters? If so, generally describe.

Yes, in order to successfully eradicate Japanese beetle; all its life stages must be targeted. Acelypm® and Acelypm® G each have the ability to enter, and move through, ground and surface waters.

3) Does the proposal alter or otherwise affect drainage patterns in the vicinity of the site? If so, describe.

The proposal will not alter or otherwise affect drainage patterns in the vicinity of the site.

d. Proposed measures to reduce or control surface, ground, and runoff water, and drainage pattern impacts, if any:

To reduce product runoff, no treatments will take place within 48 hours of a forecasted rain event.
The contractor will mix and load all treatment materials only where accidental spills will not enter surface water or wetlands. Mixing and loading will comply with Mix/Load Containment Area rules (WAC 16-229-400-480). Any spills outside a containment area must be reported to the Washington State Department of Ecology’s (Ecology) Central Regional Office, 509-575-2490.

The Contractor must adhere to use restrictions in the Environmental Hazards section of the labels. The product must not be mixed or loaded

1. On permeable, well drained soils (e.g., gravel, sand, sandy loam, loamy sand),
2. within 50 feet of intermittent streams and rivers, or natural or impounded lakes and reservoirs, and
3. within 50 feet of all wells, including abandoned wells, drainage wells, and sinkholes.

Mixing, loading, rinsing, or cleaning of this product into or from pesticide handling or application equipment or containers within 50 feet of any well is prohibited, unless conducted on an impervious pad constructed to withstand the weight of the heaviest load that may be positioned on or moved across the pad.

The Contractor must have a written spill response plan. The Contractor should also have the means to contain, cleanup, and remove contaminated material and soil as well as decontaminate and, if necessary, remediate the site.

4. **Plants** [help]

Range maps and databases consulted in this section were provided by the Washington Department of Fish and Wildlife (WDFW) at https://wdfw.wa.gov/species-habitats/at-risk/listed

a. Check the types of vegetation found on the site:

   - [x] deciduous tree: alder, maple, aspen, other
   - [ ] evergreen tree: fir, cedar, pine, other
   - [x] shrubs
   - [x] grass
   - [x] pasture
   - [x] crop or grain
   - [x] Orchards, vineyards or other permanent crops.
   - [ ] wet soil plants: cattail, buttercup, bullrush, skunk cabbage, other
   - [ ] water plants: water lily, eelgrass, milfoil, other
   - [x] other types of vegetation

b. What kind and amount of vegetation will be removed or altered?

Vegetation will not be removed or altered during proposal activities.

c. List threatened and endangered species known to be on or near the site.

The ranges of Washington threatened or endangered plant species are not known to be on or near the site.

d. Proposed landscaping, use of native plants, or other measures to preserve or enhance vegetation on the site, if any:

Japanese beetle is an invasive pest of 300 different species of vegetation. Eradication of Japanese beetle from Grandview and surrounding areas of Yakima and Benton Counties will allow agricultural commodity crops and residential vegetation to continue to thrive.
e. List all noxious weeds and invasive species known to be on or near the site.

Does not apply

5. Animals [help]

Range maps and lists in this section were provided by the Washington State Department of Fish and Wildlife’s species and habitats webpage. Consultation with confirmed reports on iNaturalist also helped determine the presence of certain species in the proposal area.

a. List any birds and other animals which have been observed on or near the site or are known to be on or near the site.

Examples include:

birds: hawk, heron, eagle, songbirds, other: woodpeckers, owls, Ruby-throated hummingbird, Rufous hummingbird, Anna’s hummingbird, Turkey vulture

mammals: deer, bear, elk, beaver, other: squirrels, chipmunks, raccoons, opossums, mice, voles, rabbits, Townsend’s big-eared bat, American badger, coyotes, bobcats, skunk

fish: bass, salmon, trout, herring, shellfish,

other: Threespine stickleback, Cutthroat trout, Longnose dace, Channel catfish, Speckled dace

b. List any threatened and endangered species known to be on or near the site.

There are no listed threatened or endangered species in or near the proposed project area.

c. Is the site part of a migration route? If so, explain.

Yes, this site lies within the Pacific Flyway for migratory birds.

d. Proposed measures to preserve or enhance wildlife, if any:

Eradication of the Japanese beetle, an invasive pest of 300 different species of vegetation, from Grandview and the surrounding areas of Yakima and Benton Counties. Establishing a quarantine around the proposed project area.

e. List any invasive animal species known to be on or near the site.

Does not apply

6. Energy and Natural Resources [help]

a. What kinds of energy (electric, natural gas, oil, wood stove, solar) will be used to meet the completed project's energy needs? Describe whether it will be used for heating, manufacturing, etc.
Does not apply

b. Would your project affect the potential use of solar energy by adjacent properties?
   If so, generally describe.

Does not apply

c. What kinds of energy conservation features are included in the plans of this proposal?
   List other proposed measures to reduce or control energy impacts, if any:

7. **Environmental Health** [help]

a. Are there any environmental health hazards, including exposure to toxic chemicals, risk of fire and explosion, spill, or hazardous waste, that could occur as a result of this proposal?
   If so, describe.

Yes, there is a small chance of exposure to the insecticide in use during mixing and application, as well as some potential for spills. In the highly unlikely situation of a rain event during application, there is also a chance for exposure to an insecticide through runoff.

1) Describe any known or possible contamination at the site from present or past uses.

   Does not apply

2) Describe existing hazardous chemicals/conditions that might affect project development and design. This includes underground hazardous liquid and gas transmission pipelines located within the project area and in the vicinity.

   Does not apply

3) Describe any toxic or hazardous chemicals that might be stored, used, or produced during the project's development or construction, or at any time during the operating life of the project.

   The insecticides Acelepryn® and Acelepryn® G would be used during the operational phase of the proposed project. These insecticides may be safely stored within the proposed project site according to label instructions. Acelepryn® and Acelepryn® G are group 28 insecticides, meaning their relative toxicity is lower than other insecticides designed for the same purpose. These two insecticides contain an active ingredient of Chlorantraniliprole, and are registered for use on turf grass and ornamental plants.

4) Describe special emergency services that might be required.

   In the event of a major pesticide spill, a Department of Ecology Spill Response may be required. Ecology's Central Regional Office is the contact for the proposed project.

5) Proposed measures to reduce or control environmental health hazards, if any:

   Pesticide applicators will operate in accordance with the label of the product in use. Containment and
cleanup materials will be required to be on-site during product mixing/loading and application. Information about each product will be provided to residents and stakeholders within the proposed project area. Properties will not be treated unless a resident or stakeholder gives consent. Residents and stakeholders will be notified by their preferred contact method (direct contact, text, email, phone call) before treatment of their property. Information regarding reentry to treated property will be distributed and posted.

b. **Noise**

1) What types of noise exist in the area which may affect your project (for example: traffic, equipment, operation, other)?

   Does not apply

2) What types and levels of noise would be created by or associated with the project on a short-term or a long-term basis (for example: traffic, construction, operation, other)? Indicate what hours noise would come from the site.

   Short-term noise may result from the proposal activities. The noise will be property specific and variable depending on the property size.

3) Proposed measures to reduce or control noise impacts, if any:

   Noise will generally be short-term and depend on the size of the property being treated.

8. **Land and Shoreline Use**  [help]

a. What is the current use of the site and adjacent properties? Will the proposal affect current land uses on nearby or adjacent properties? If so, describe.

   The proposed area is currently used for residential housing, community facilities, lodging, agriculture, and business. The proposal is not expected to affect land uses of these properties.

b. Has the project site been used as working farmlands or working forest lands? If so, describe. How much agricultural or forest land of long-term commercial significance will be converted to other uses as a result of the proposal, if any? If resource lands have not been designated, how many acres in farmland or forest land tax status will be converted to nonfarm or nonforest use?

   20,685 acres of the proposed project area is currently designated as cropland/agriculture. It is not expected that project activities would cause these lands to be converted to other uses.

1) Will the proposal affect or be affected by surrounding working farm or forest land normal business operations, such as oversize equipment access, the application of pesticides, tilling, and harvesting? If so, how:

   Working farmland or forestland will not be treated as part of the proposed project.

c. Describe any structures on the site.

   Structures within the proposed project area are predominantly residential (houses, apartments, duplexes, townhomes etc.). Other structures include City buildings, schools, and some business and industry (shops, grocery stores, restaurants, distribution centers, and various industry factories/warehouses).
d. Will any structures be demolished? If so, what?

No structures will be demolished.

e. What is the current zoning classification of the site?

AG - Agricultural
C-1 - Neighborhood Business
C-2 – General Business
M-1 – Light Industrial
M-2 – Heavy Industrial
MR – Manufactured Home Park
PF – Public Facility
R-1 – Low Density Residential
R-2 – Medium Density Residential
R-3 – High Density Residential

f. What is the current comprehensive plan designation of the site?

R-1 Single-Family Residential Suburban
R-1 Low Density Residential
R-2 Medium Density Residential
R-1P Single-Family Residential Park District
MR Manufactured Home Park District
C-1 Neighborhood Business District
C-2 General Business District
BP Business Park District
O Office District
M-1 Light Industrial District
M-2 Heavy Industrial District
PE Public Facility District
AG Agriculture

g. If applicable, what is the current shoreline master program designation of the site?

Does not apply

h. Has any part of the site been classified as a critical area by the city or county? If so, specify.

Category 1, 2, and 3 wetlands are found within the proposed project area. Critical aquifer recharge areas with a “High” susceptibility of contamination are found in northwest corner of the proposed project area. Palustrine Aquatic Habitat within the site has been designated as Fish and Wildlife Habitat Conservation Areas by the WDFW. As mentioned in section 3 question C, part d before, contracted pesticide applicators are required to operate according to the label instructions and will take care not to mix or load product where it could contaminate surface water or wetlands.

i. Approximately how many people would reside or work in the completed project?

Does not apply

j. Approximately how many people would the completed project displace?
k. Proposed measures to avoid or reduce displacement impacts, if any:

Does not apply

L. Proposed measures to ensure the proposal is compatible with existing and projected land uses and plans, if any:

The proposal is not compatible with land marked as farmland and therefore those land designations are not included in this proposed project.

m. Proposed measures to reduce or control impacts to agricultural and forest lands of long-term commercial significance, if any:

Washington State Department of Agriculture’s efforts to eradicate Japanese beetle will result in the preservation of agricultural commodity crops, forest lands, landscaping and other vegetation of Washington state.

9. Housing [help]

a. Approximately how many units would be provided, if any? Indicate whether high, middle, or low-income housing.

Does not apply

b. Approximately how many units, if any, would be eliminated? Indicate whether high, middle, or low-income housing.

Does not Apply

c. Proposed measures to reduce or control housing impacts, if any:

Does not apply

10. Aesthetics [help]

a. What is the tallest height of any proposed structure(s), not including antennas; what is the principal exterior building material(s) proposed?

Does not apply

b. What views in the immediate vicinity would be altered or obstructed?

Does not apply

c. Proposed measures to reduce or control aesthetic impacts, if any:
Does not apply

11. **Light and Glare** [help]

a. What type of light or glare will the proposal produce? What time of day would it mainly occur?

Does not apply

b. Could light or glare from the finished project be a safety hazard or interfere with views?

Does not apply

c. What existing off-site sources of light or glare may affect your proposal?

Does not apply

d. Proposed measures to reduce or control light and glare impacts, if any:

Does not apply

12. **Recreation** [help]

a. What designated and informal recreational opportunities are in the immediate vicinity?

Parks, playgrounds, biking, picnicking areas, swimming, disc-golf, and ball fields/courts.

b. Would the proposed project displace any existing recreational uses? If so, describe.

The proposed project may require temporary closure of a property used for recreation. The City of Grandview, along with the public, would be informed of a potential closure before treatment. Once completed, reentry information would be posted.

c. Proposed measures to reduce or control impacts on recreation, including recreation opportunities to be provided by the project or applicant, if any:

If possible, treatment of a property used for recreation would take place outside of the properties operational hours. No recreational opportunities would be provided by the proposed project.

13. **Historic and cultural preservation** [help]

a. Are there any buildings, structures, or sites, located on or near the site that are over 45 years old listed in or eligible for listing in national, state, or local preservation registers? If so, specifically describe.

Historic landmarks:
Listed on the National Register of Historic Places for Yakima County:
b. Are there any landmarks, features, or other evidence of Indian or historic use or occupation? This may include human burials or old cemeteries. Are there any material evidence, artifacts, or areas of cultural importance on or near the site? Please list any professional studies conducted at the site to identify such resources.

No

c. Describe the methods used to assess the potential impacts to cultural and historic resources on or near the project site. Examples include consultation with tribes and the department of archeology and historic preservation, archaeological surveys, historic maps, GIS data, etc.

Consultation with the Yakama Tribe and The Department of Archaeology and Preservation’s WISAARD database indicated no evidence of Indian or historic use or occupation within the project area.

d. Proposed measures to avoid, minimize, or compensate for loss, changes to, and disturbance to resources. Please include plans for the above and any permits that may be required.

Does not apply

14. Transportation [help]

a. Identify public streets and highways serving the site or affected geographic area and describe proposed access to the existing street system. Show on site plans, if any.

Interstate 82 is the main road to access the proposal site. The main arterials include Wine Country Road and Euclid Street.

See attached map.

b. Is the site or affected geographic area currently served by public transit? If so, generally describe. If not, what is the approximate distance to the nearest transit stop?

Current public transportation services are available for eligible elderly and handicapped citizens by People for People, a private non-profit organization. They also operate the Community Connector, which connects Yakima, Prosser and cities along the I-82 corridor. Within the proposal site, the Community Connector stops at Lucky 7 Mini Mart, 226 Wine Country Road; and Safeway, 610 Wine Country Road.
c. How many additional parking spaces would the completed project or non-project proposal have? How many would the project or proposal eliminate?

Does not apply

d. Will the proposal require any new or improvements to existing roads, streets, pedestrian, bicycle or state transportation facilities, not including driveways? If so, generally describe (indicate whether public or private).

No

e. Will the project or proposal use (or occur in the immediate vicinity of) water, rail, or air transportation? If so, generally describe.

No

f. How many vehicular trips per day would be generated by the completed project or proposal? If known, indicate when peak volumes would occur and what percentage of the volume would be trucks (such as commercial and nonpassenger vehicles). What data or transportation models were used to make these estimates?

Does not apply

g. Will the proposal interfere with, affect or be affected by the movement of agricultural and forest products on roads or streets in the area? If so, generally describe.

No

h. Proposed measures to reduce or control transportation impacts, if any:

Does not apply

15. Public Services

a. Would the project result in an increased need for public services (for example: fire protection, police protection, public transit, health care, schools, other)? If so, generally describe.

Does not apply

b. Proposed measures to reduce or control direct impacts on public services, if any.

Does not apply

16. Utilities
a. Circle utilities currently available at the site:
   electricity, natural gas, water, refuse service, telephone, sanitary sewer, septic system,
   other ____________

b. Describe the utilities that are proposed for the project, the utility providing the service,
   and the general construction activities on the site or in the immediate vicinity which might
   be needed.

   Does not apply

Proposal site map:

Pink: Border of Yakima (left) and Benton (right) Counties.
Blue: Wine Country Road
Orange: Interstate 82
Green: Euclid Street
Potential wetland areas:
C. Signature [HELP]

The above answers are true and complete to the best of my knowledge. I understand that the lead agency is relying on them to make its decision.
