

2017 Freshwater Emergent Weed Monitoring Plan

For

Herbicide Applications to Freshwater Emergent Noxious and Quarantine Weeds
performed under the Noxious Weed National Pollutant Discharge Elimination
System (NPDES) Permit WAG9993000

Prepared by

Washington State Department of Agriculture
Pest Program
January 2017

NPDES WAG993000 requires that the Washington State Department of Agriculture (WSDA) submit an annual freshwater emergent weed monitoring plan to the Washington State Department of Ecology (WSDOE).

WSDA plans to monitor a subset of bispyribacsodium, penoxsulam, flumioxazin, or carfentrazone-ethyl applications if the agency or its limited agents propose to use these active ingredients under the permit. WSDA will use the WSDOE on-line permit application database to identify entities requesting to use the above products and then develop specific monitoring goals when the information becomes available.
