Subject: Updated List of Pesticides Allowed for Use on Marijuana

The Washington State Department of Agriculture (WSDA) has recently updated the list of pesticides that are allowed for use in marijuana production in Washington State, based on criteria previously established by WSDA.

WSDA has added 29 pesticides to the list of allowable products and removed 27 pesticides because the registrations for their distribution in Washington were voluntarily cancelled.

Pesticides containing three new active ingredients (Bacillus subtilis Strain IAB/BS03, Lauryl sulfate, Rhamnolipid biosurfactant) were added to the list. Most of the pesticides that were added to the list contain active ingredients that were already allowed for use in marijuana production.

Please check your stock of pesticides against the list to ensure that you are using an allowed product. Marijuana growers can continue to use any existing stocks of the 27 pesticides that were removed from the list, but no new product can be purchased.
